

The maintenance period for our boards based on the coating we supply is 3 – 5 years the 2 year discrepancy is based on environmental conditions and what the client would ultimately deem aesthetically acceptable.

We supply 18 litre drums for recoating purposes.

The process of recoating is done by:

1. Cleaning the boards with a wet rag in order to remove any contaminants and debris
2. Apply 2 coats of our approved sealer over the boards
 - a. 1st coat is based on 12 m² per litre (1 drum = 216m² of 2nd coat)
 - b. 2nd coat is based on 14 m² per litre (1 drum = 252m² of 2nd coat)
 - c. Apply sealer over the boards with a Pad brush. Please see image below:
